

Price comparison website for online shopping

Abstract

Price comparison sites are designed to compare the price of goods and services from a range of providers, which will help consumers in making decisions to choose products that will save their money online. Considering the customers' busy lifestyle, especially those who are living in the city area, most of the consumers prefer to buy their needs through the internet because it saves their time. Besides, consumers always go for the cheaper price in purchasing products therefore by using a price comparison website, customers do not have to travel from shop to shop only to survey the price offered by different shops for the same product. They can just check it from the price comparison website itself and decide where they should buy the products they need. This project, named Price4You is the place where shoppers could find great deals on the products. The best deals will be clearly highlighted. To obtain best deals from Price comparison websites web crawlers and web scraping techniques are used to fetch detailed information. This way, the project aims to provide a solution for online customers to buy products at a good deal and save their valuable time, effort, and money.
